CUHK X Challenge Honor Declaration

Verification package and organizer-run evaluation | 15 September 2026

This declaration accompanies one invited team's verification package for one track. Every team member must read, complete, and sign it. It supplements, and does not replace, the published competition and Kaggle rules.

Team and submission details

Track	☑ Small Model Track Large Model Track
Kaggle team name	AGX
Team members	Atharv
Contact email	atharvgaur591@gmail.com
Selected Kaggle submission(s)	Identifier(s): 56212349 ,56213683 UTC time(s):2026-09-13 17:45:03,2026-09-13 19:15:08

Declarations

By signing below, each team member personally confirms that:

1. The package is complete and accurate to the best of our knowledge and corresponds to the selected final Kaggle submission(s). Its code, weights, configurations, prompts, adapters and API settings are the frozen components used for those submissions.
2. We have not manually labelled test samples, used test-set ground-truth labels for training or tuning, used multiple accounts for advantage, or colluded with another team in breach of the published fair-play rules.
3. All external data, pretrained models, generated or pseudo-labelled data, software, services and APIs are disclosed with their purposes, sources, versions, licences and access requirements.
4. The package contains sufficient code, pinned dependencies, configuration, documentation and permitted artifacts for organizer-run verification and private-data evaluation. It contains no real API keys, passwords or other credentials.
5. We authorize the Organizing Committee to inspect and run the submitted solution on organizer-controlled challenge data. We will not seek access to private data, labels, organizer credentials or other teams' confidential materials.
6. Any requested clarification or documented environment or path repair will not be used to replace the frozen model, prompts, ensemble or method. Inaccurate or misleading information may be handled under the published competition rules.

Track-specific confirmation

☑ Small Model Track: The frozen solution satisfies the published model-size and model/API/LLM restrictions.

☐ Large Model Track: Every pretrained model, API, prompt, parameter, adapter and external service is accurately disclosed.

Signature

Each undersigned team member personally confirms the statements above. Add rows to the signature table if the team has more members; every team member must sign.
